

## Economic Contribution of Hardwood Products: State of Montana

Sales of hardwood products added \$947.0 million in value to the Montana economy in 2016, according to an Agribusiness Consulting study commissioned by the U.S. Hardwood Federation.

### Economic Contribution Results

- In 2016, Montana hardwood product output was valued at \$564.4 million
- The economic “ripple effects” of these hardwood products supported:
  - \$947.0 million in economic output,
  - \$360.9 million in gross state product (GSP), and
  - 5,755 jobs in the state economy.

For every \$1 million in output of hardwood products, 6.0 jobs and \$0.38 million of GSP are supported within Montana.

### Economic Impacts

This study analyzed the economic contribution of the hardwood industry by aggregating three separate impacts: direct, indirect, and induced impacts. Direct impacts are the benefits producers directly received in the form of additional sales. Indirect impacts are realized by businesses supporting the hardwood industry, like industrial loggers and transportation companies. Induced impacts are those created from the spending of labor income and profits and would include, for example, sawmill employees buying groceries. For example, sawmill employees purchasing groceries. For this study, these impacts are aggregated to provide a holistic view of how the hardwood industry supports the Montana state economy.

### Economic Variable Definitions

- Jobs are the total number of jobs supported by the economic activity.
- Labor Income is the total value of all employment income, including employee compensation and proprietor income.
- Gross State Product (GSP) is very similar to GDP and is the total value added by each step in the supply chain. The GSP can be thought of as the summation of labor income, profit, taxes and indirect business taxes.
- Output can be defined as the summation of the business revenues that are associated with the production of hardwood products.
